Hong Leong SMART Growth Fund (HLSGF)

April 2024

Fund Features

1. Investment Objective

The primary objective of the fund is to provide investors with steady long-term capital growth at moderate risk.

2. Investment Strategy & Approach

The strategy is to provide investors an access into a diversified portfolio of growth stocks listed on Bursa Malaysia and/or in any foreign stock exchanges that offer potential capital appreciation at moderate risk. The fund may feed into collective investment schemes that meet the fund's objective. At inception, HLSGF will invest by feeding into Kenanga Growth Fund ("Target Fund") with the option to increase the number of funds or replace the Target Fund in future. The Target Fund's assets are actively invested in a diversified portfolio of Malaysian equity and equity-related securities, such as warrants and convertible loan stocks which are capable of being converted into new shares. The Target Fund may invest up to 25% of the Fund's NAV in foreign markets, which may include but not limited to Singapore, Indonesia, Thailand, Philippines, Vietnam, India, Hong Kong, China, Japan, Korea, Taiwan, Australia, United States of America and any other Eligible Markets where the regulatory authority is an ordinary or associate member of the International Organization of Securities Commissions. The Target Fund does not have an active asset allocation strategy but seeks to manage portfolios by investing in companies that satisfy the criteria of having a sustainable and credible business model, and are also trading at a discount to their intrinsic value. However, under conditions of extreme market volatility and/or when the market is trading at valuations deemed unsustainable, the Fund will seek to judiciously scale back its equity exposure.

3. Asset Allocation

Under normal market conditions, the Target Fund's equity exposure is expected to range from 75% to 95% of the Target Fund's NAV with the balance in money market instruments, fixed deposits and/or cash.

4. Target Market

This fund is suitable for investors who have long term investment time horizon and have a moderate risk profile with tolerance for short-term periods of volatility.

Hong Leong SMART Growth Fund (HLSGF)

Market Review, Outlook & Strategy relevant to Target Fund

US equities fell sharply, with the Dow Jones -5.0%, S&P 500 4.2% and Nasdaq 4.4% respectively due to a higher than expected inflation print which sparked fears of delays for interest rate cuts. US Consumer Price Index (CPI) rose 0.4% month-on-month (MoM) coming in higher than consensus' expectation of 0.3%. On a year-on-year (YoY) basis, both headline and core CPI rose to 3.5% and 3.8% respectively, above economists' forecasts. In addition, March saw an additional 303,000 jobs added, way ahead of the 214,000 jobs anticipated. With the overall higher inflation and strong jobs market, expectations for rate cuts are now pushed back, with a June cut appearing unlikely and total number of cuts expected in 2024 reduced to one or two from six at the start of the year. The 10-year US Treasury (UST) yield rose steeply 11% to 4.68%, close to levels last seen in November last year. In Asia, China/Hong Kong (Hang Seng) equities rallied 7.4% post conclusion of the Politburo's quarterly meeting that emphasizes on solving the property sector issues. Main highlight was the explicit mention for local governments, property developers and financial institutions to ensure delivery of pre-sold homes. It is still unclear whether the central government will get directly involved. The Politburo also highlighted the need to better handle housing inventory and improve the supply of new homes to meet market demand. Separately, Japanese equities gave up some of their earlier gains with the Nikkei declining 4.9%, driven by increasing concerns on the risk of imported inflation weakening domestic demand. Bank of Japan (BoJ) kept interest rates around zero and projected inflation to hit 1.9% for both 2024 and 2025 and, to stay around 2% in 2026. With no indication on its future rate hike path, the Japanese Yen stumbled to a 34-year low at 157 against the US dollar. Locally, the FBMKLCI rallied by 2.6%, reaching a two-year high of 1576 points, despite the Middle East geopolitical concerns and persistent selling by foreign investors. The broader market rallied as well with FBM100, FBM Shariah and FBM Small Cap rising 2.5%, 3.8% and 3.4% respectively. While foreign selling continued for the second consecutive month at RM1.37 billion, net selling momentum fell by 52% month-on-month (MoM). Overall, April's year-to-date (YTD) net outflow of -RM2.25 billion is close to 2023's full-year outflow of -RM2.33 billion. That being said, the market was supported by net buy of RM5.1 billion worth of equities by local institutional investors. Sector wise, utilities were the best performer in April alongside Industrials with strong gains seen in YTL Power, YTL Corp and Press Metal. In commodities, Brent crude oil prices grew 0.4% to USD 87.86 per barrel amidst the Middle East geopolitical conflict. Meanwhile, crude palm oil (CPO) declined 7.1% to RM3,818 per ton as palm oil imports from India declined while soybean against CPO premiums narrowed as soybean acreage increased, attributed to increased soybean supply coming in the next harvesting cycle.

Markets could see near term volatility, as higher-than-expected inflation constraints the Federal Reserve's (Fed) ability to reduce interest rates. Nonetheless, the Fed could still shift to cutting rates towards the end of the year, with a similar pattern expected in the Eurozone. Easier monetary conditions globally could then support growth and liquidity, thus improving the outlook for equities. China's additional fiscal stimulus has been supportive and recently announced measures to revive the property market is a step in the right direction. We are positive on the Malaysian equity market this year as we expect resilient GDP growth of 4%-5%, improved momentum of policy execution on construction and infrastructure projects and rising foreign direct investment (FDI), whereas valuation and foreign shareholding remains low. Key events to watch include the Government's plans to rationalize subsidies and the execution of planned infrastructure projects. Given the positive outlook, we are positive on sectors such as financials, construction, property, new energy and utilities. Additionally, we continue to favor the technology sector as the key beneficiary of long-term growth trends such as artificial intelligence (AI), electric vehicles (EVs) and supply chain relocation..

Actual Annual Investment Returns for the Past Ten (10) Calendar Years

Net returns are adjusted for tax and fund management fees.

Those are the actual returns in the past ten (10) years, or since inception if shorter, and are strictly the performance of the investment-linked fund. Thus, the returns are not earned on the actual premium paid of the investment-linked product.

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
Benchmark	10.5%	-5.7%	-3.9%	-3.0%	9.5%	-5.9%	-6.0%	2.4%	-3.7%	-4.6%	-2.7%

Notice: Past performance of the fund is not an indication of its future performance.

The fund was only launched on 1 October 2012. The actual investment returns are calculated based on unit price from 1 October 2012 to 31 December 2012.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this investment. The following are the non-exhaustive list of risks associated to this fund.

1. **Market Risk**
   Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. **Liquidity Risk**
   Liquidity risk is the risk that the fund invested cannot be readily sold and converted into cash. This may arise when the trading volume is low and/or where there is a lack of demand for the security.

3. **Credit Risk**
   This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. **Interest Rate Risk**
   The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

5. **Country Risk**
   The foreign investment of a fund may be affected by the political & economic conditions of the country which the investments are made.

6. **Currency Risk**
   This risk is associated with investments that are denominated in foreign currencies. Fluctuation in foreign exchange rates will have an impact on the value of the funds.

Hong Leong SMART Growth Fund (HLSGF)

7. **Concentration Risk**
   This risk is associated with a feeder fund whereby the investments of such fund are not diversified. A feeder fund invests mainly into another collective investment scheme.

8. **Warrant and Convertible Loan Stock Risk**
   The price of the warrant and convertible loan stock are typically linked to the underlying stock. However, it generally fluctuates more that the underlying stocks due to the greater volatility of the warrants market. The fluctuation may have a great impact on the value of the funds. Generally, as the warrants have a limited life, they will depreciate in value as they approach their maturity date, assuming that all other factors remain unchanged. Warrants that are not exercised at maturity become worthless and negatively affect the NAV of the Fund. Convertible loan stocks must be converted to the underlying stock at a predetermined conversion ratio and conversion rate, and in the event the total costs of converting into underlying stock is higher than the market price of that the underlying stock, it will negatively affect the NAV of the Fund.

Risk Management
The company has in place its Authorized Investment Framework which forms part of the Risk Management process. The authority framework covers the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. The potential investment risks that are taken into consideration in managing the fund include economic conditions, liquidity, qualitative and quantitative aspects of the securities. The investment manager(s) have put in place the following controls to reduce the risks through:
a) having a flexible tactical asset allocation
b) investing in a wide range of companies across different sectors
c) setting prudent investment limits on various exposures
d) taking into account the liquidity factor in selecting securities
e) engaging in the hedging of foreign currency exposure where appropriate

Basis of Unit Valuation
1. The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
2. The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
3. The maximum value of any asset of any fund shall not exceed the following price:
   a) The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
   b) In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date;

   plus any expenses which would have been incurred in its acquisition.
4. To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances
The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Target Fund Details
Kenanga Growth Fund is an Equity fund managed by Kenanga Investors Berhad. The past performance of this fund is as follows:

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Performance	26.4%	9.3%	20.9%	-0.1%	25.8%	-18.1%	13.5%	8.9%	14.4%	-12.7%

Basis of Calculation of Past Performance
The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

For the underlying Target Fund, past performance is calculated after adjusting for distribution and/or additional units, if any.
