

HLA Balanced Fund (HLABF)

April 2024

Fund Features

1. Investment Objective

This fund aims to achieve consistent capital growth over the medium-to-long term by investing in a diversified investment portfolio containing a balanced mixture of equities and fixed income securities.

2. Investment Strategy & Approach

HLABF will principally feed into third party collective investment schemes that meet the fund's objective. HLABF may also invest directly in a diversified portfolio of domestic and/or foreign assets including equities, equity-related securities, deposits or any other financial instruments that offer potential capital appreciation.

At inception, the fund will invest by feeding into Hong Leong Balanced Fund ("Target Fund"), with the option to increase the number of funds or replace the Target Fund in future.

The Target Fund invests in equity securities of companies operating in Malaysia. Generally, companies that have low shareholders' risk, strong balance sheets with strong operating cash flows and sustainable earnings, and low relative valuations represented by reasonable price earnings ratio (PER) or price-to-book ratios (P/B) are selected. The manager combines a "top-down" asset and sector allocation analysis with a "bottom-up" stock selection process for the equity portion of the fund. For the fixed income portion of the Target Fund, the manager maintains fundamental and active management of the Target Fund, where investment decisions are made in accordance to future projections of interest rates, return on investments and access to liquidity.

3. Asset Allocation

The Target Fund will invest a minimum of 40% and maximum of 60% of its NAV in equities. The balance of its NAV will be invested in fixed income securities and money market instruments.

4. Target Market

This fund is suitable for investors have conservative to moderate risk-ward temperament and have a medium-to-long term investment horizon.

HLA Balanced Fund (HLABF)

Market Review, Outlook & Strategy

Equities

During the month, the FTSE Bursa Malaysia (FBM) KLCI rose 2.6% to close at 1,576 points. The broader market outperformed as the FBM EMAS Index rose 2.6% to close at 11,872 points. Small caps outperformed as the FBM Small Cap Index rose 3.4% to close at 17,885 points.

The Malaysia market outperformed global and regional peers despite foreign selling. The main local index was led by the utility sector, namely YTL Power International Berhad and YTL Corporation Berhad.

On the corporate front, MISC Berhad announced that it has secured long-term contracts for three Liquefied Natural Gas (LNG) carriers from QatarEnergy. Axiata Group Berhad and India's Bharti Airtel Limited signed a definitive agreement to combine their Sri Lankan operations.

The Fund will continue to identify companies that are potential winners in growing industries helmed by capable management.

Fixed Income

United States Treasuries (UST) saw selloffs with no sign of respite in April. Markets trimmed further on Federal Reserve (Fed) rate cut pricing, now closer to one 25 basis points (bps) cut in the fourth quarter of 2024. At the Federal Open Market Committee (FOMC) meeting, the Fed is widely expected to hold the Fed Funds Rate (FFR) unchanged at 5.25%-5.50%. Market now expects the Fed to give qualitative guidance that Powell and the majority of FOMC members no longer expect 3 cuts in 2024 as previously indicated.

Locally, Malaysia's headline Consumer Price Index (CPI) was unchanged at 1.8% year-on-year (YoY) in March (February: 1.8%) and core CPI eased to 1.7% YoY (February: 1.8%) despite the increase in services tax to 6%-8% from 6% on 1 March 2024. Trade data also showed improvement as contraction in exports was milder-than-expected at -0.80% compared to consensus' -1.1%. Imports grew strongly at 12% showing demand for capital goods items. The sovereign bond markets saw mild sell-off largely due to a knee jerk reaction from higher UST and rising geopolitical tensions. The 10-Year Malaysian Government Securities (MGS) ended the month at 3.95% whilst the 30-Year MGS stood at 4.25%. On the corporate side, we saw names like APM Auto and Sunway Healthcare issued new primary bonds. Both issuances received strong demand from investors.

The strong US inflation and economic data have strengthened the case for delayed or fewer Fed rate cuts this year, keeping the broad US Dollar strength intact and pressuring Asian FX including the Ringgit. Locally, the nation's inflation outlook is still exposed to upside risks from subsidy rationalization, global commodity price movement (i.e. crude oil, CPO and cocoa prices) and financial market developments while the softer-than-expected first quarter of 2024 advance Gross Domestic Product (GDP) growth of 3.9% YoY (Fourth quarter of 2023: +3.0%) raised concerns about a slower-than-anticipated recovery pace this year. The Monetary Policy Committee (MPC) will next meet on 8-9 May. We believe Bank Negara Malaysia (BNM) will maintain Overnight Policy Rate (OPR) unchanged at 3%.

We continue to overweight corporate bonds for additional yield pickup and seek opportunities to rebalance our portfolios.

Investment Risks

All investments carry risks. Policy Owners must be prepared to accept certain degree of risk associated with this Investment. The following are the non-exhaustive list of risks associated to this fund.

1. Market Risk

Market risk stems from the fact that there are other economy-wide perils, which threaten all businesses. It is mainly caused by uncertainties in the economy, political and social environment.

2. Liquidity Risk

Defined as the ease with which a security can be sold at or near its fair value. This risk occurs in thinly traded or illiquid securities. Should the fund need to sell a relatively large amount of such securities, such action itself may significantly depress the selling price.

3. Credit Risk

This refers to the possibility that the issuer of a security will not be able to make timely payments of interest or principal repayment on the maturity date. The default may lead to a fall in the value of the funds.

4. Interest Rate Risk

The level of interest rates has an impact on the value of investments. Any increase in rates will lead to a fall in the value of securities, thus affecting the value of the funds.

5. Concentration Risk

Concentration risk occurs when a portfolio is overweight on a particular security, sector or asset class. As the fund invests mainly into third party collective investment scheme (CIS) and by virtue of the CIS investing in a diversified portfolio of equities as well as dynamic asset allocation strategy between equities and other financial securities, the concentration risk is mitigated.

6. Target Fund(s) Risk

The fund invests in third party CIS which is being managed by another fund manager. The CIS is carefully selected in order to ensure that the objectives of said CIS are appropriately aligned with the fund. Nevertheless, the Fund Manager does not have control over the management of the CIS and any adverse effect on the CIS will inevitably affect the fund. In such instance, the Fund Manager may replace the CIS with another CIS which the Fund Manager considers to be more appropriate or invest directly in a diversified portfolio in order to meet the objective of the fund. Please also refer to the Target Fund's prospectus for more detailed and comprehensive information on Target Fund specific risks.

If the fund invests in Foreign Assets, it will be exposed to the following risks:

7. Country Risk

The foreign investments made by the fund are subjected to risks specific to the country in which it invests. Such risks include changes in a country's economic fundamentals, social and political stability, currency movements, foreign investment policies and etc. The risk may be mitigated by closely monitoring the developments in the countries in order to identify any emerging risk.

8. Currency Risk

This risk applies to foreign investment, in which the investment may rise or fall due to fluctuation in the foreign currencies. Adverse movements in currencies exchange rates can result in a loss to the investment.

HLA Balanced Fund (HLABF)

Risk Management

The Company has in place its authorized investment framework which forms part of the Risk Management process. The authority framework covers the nature and scope of the investment authority that is exercisable by various parties in managing the Company's investments. The potential investment risks that are taken into consideration in managing the fund include economic conditions, liquidity, qualitative and quantitative aspects of the securities. The investment manager(s) have put in place the following controls to reduce the risks through:

- a) having a flexible tactical asset allocation
- b) investing in a wide range of companies across different sectors
- c) setting prudent investment limits on various exposures
- d) taking into account the liquidity factor in selecting securities
- e) engaging in the hedging of foreign currency exposure where appropriate

Basis of Unit Valuation

1. The assets of every fund are to be valued to determine the value at which units of a particular fund can be liquidated or purchased for investment purposes.
2. The unit price of a unit of a fund shall be determined by the Company but in any event shall not be less than the value of fund of the relevant fund (as defined below), divided by the number of units of the given fund in issue on the business day before the valuation date, and the result adjusted to the nearest one hundredth of a cent.
3. The maximum value of any asset of any fund shall not exceed the following price:
 - a) The last transacted market price at which those assets could be purchased or sold on the business day before the valuation date; or
 - b) In the case of securities for which market values are not readily available, the price at which, in our Investment Manager's opinion, the asset may have been purchased on the business day before the valuation date;
 plus any expenses which would have been incurred in its acquisition.
4. To ensure fair treatment to all unit holders, the cost of acquiring and disposing of assets is recouped by making a transaction cost adjustment to the net asset value per unit.

Exceptional Circumstances

The Company reserves the right to defer the payment of benefits (other than death benefit) under this Policy for a period not exceeding six (6) months from the date the payment would have been normally effected if not for intervening events such as temporary closure of any Stock Exchange in which the fund is invested which the Company, in its discretion, may consider exceptional.

Target Fund Details

Hong Leong Balanced Fund is a Balanced fund managed by Hong Leong Asset Management. The past performance of this fund is as follows:

Year	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Performance	9.9%	1.1%	13.6%	1.1%	15.4%	-4.7%	14.0%	15.2%	11.1%	-9.9%

Source: Hong Leong Asset Management

Basis of Calculation of Past Performance

The historical performance of the fund is calculated based on the price difference over the period in consideration compared to the older price of the period in consideration.

$$\frac{\text{Unit Price}_t - \text{Unit Price}_{t-1}}{\text{Unit Price}_{t-1}}$$

For the underlying Target Fund, past performance is calculated after adjusting for distribution and/or additional units, if any.

Others

HLA Balanced Fund is managed by HLA. Any amount invested in this fund is invested by HLA on behalf of Policy Owner in equity, fixed income, collective investment scheme, foreign asset, derivatives and money market instrument/s. If the financial institutions and/or corporations issuing the equity, fixed income, collective investment scheme, foreign asset, derivatives and money market instruments defaults or becomes insolvent, the Policy Owner risks losing part or all of his/her amount that were invested into the instruments on his/her behalf by HLA.

THIS IS AN INSURANCE PRODUCT THAT IS TIED TO THE PERFORMANCE OF THE UNDERLYING ASSETS, AND IS NOT A PURE INVESTMENT PRODUCT SUCH AS UNIT TRUSTS.
